DETAILED ACTION

Claims 1-27 are allowed.

The following is an examiner's statement of reasons for allowance: Firstly, the examiner notes, with appreciation, the useful clarification that applicant provided regarding the distinction between ion beam etching and focused ion beam etching. The prior art of record fails to teach providing a strippable film over a layer to be patterned and then using a focused ion beam to directly pattern, in one step, both the strippable film and the layer to be patterned and then removing the strippable film. Typically a prior art process uses standard photolithography steps to pattern a photoresist layer that overlies a layer to be patterned. Then, using the patterned resist as a mask, the exposed portion of the underlying layer is then patterned. The prior art does teach a process wherein two layers are patterned in one step but these prior art processes fail to teach the claimed step of removing the upper most layer of the patterned bilayer. Shimizu's (US 6,012,218) teachings are exemplary of both of these prior art scenarios. The attached PTO-892 cites two newly found references that read on at least claim 1, however, neither of these references constitute prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
